I have an array named "array" that contains numerous values stored inside it. I need to be able to delete certain cells from the array but only if the value is greater than or equal to 100. This is what I've tried so far, but it doesn't seem to be working. Any help is appreciated! Do While (Err.Number = 100) Then array(i) = "" End If Next A: I'm not sure if you're asking about deleting elements or whether you're just rearranging the entries. There are several ways to approach this: Change the data values in the array You can iterate over the array and check each value: For i = 0 To 20 If Len(array(i)) > 0 Then If array(i) >= 100 Then array(i) = "" End If Next Note that the Len() call returns the number of characters in a string. If you want to know if there are any characters at all, use the HasText() function instead. Delete entries from the array You can use a loop that builds a new array and resets each element to a string of length zero: Dim newArray() As String For i = 0 To 20 If Len(array(i))

The int values are apparently bounded. However, the method itself uses an infinite stream. The compiler error says: Stream type missing: Only one default (stream not supported in switch) If I remove the

'infiniteStream' from the method, the compiler is happy again. What's the problem with the stream type and why doesn't it pick up the infiniteStream? A: Simple answer: You must use the Stream.range method in order to convert an int into the 'infinite' Stream required by the max method. In fact, according to the javadoc for Stream.range, the stream should be of type 'int': An int stream has a consistent start point and a terminal end point. In addition, there are no values outside the valid range of int values. The int stream returned by this method will be unbounded. So if you use: `int[] arr = d0c515b9f4`
